dumpsys调试HAL层

关闭音频录音dump功能

dumpsys media.audio flinger debug disable cap dump

dumpsys默认是dump Android服务状态,为了方便Audio Hal层调试,在dumpsys增加调试指令,具体如下

打印audio hal层状态 dumpsys media.audio_flinger debug hal_state # 打开audio hal debug 详细打印 dumpsys media.audio_flinger debug enable_debug_log # 关闭audio hal debug 详细打印 dumpsys media.audio_flinger debug disable_debug_log # 打开音频播放dump功能, /data/local/audio/out_pcm_dump.pcm dumpsys media.audio_flinger debug enable_play_dump # 关闭音频播放dump功能 dumpsys media.audio flinger debug disable play dump # 打开音频录音dump功能, /data/local/audio/in_pcm_dump.pcm dumpsys media.audio flinger debug enable cap dump
